

## Data Category Module Definition

**Name:** Core

**Namespace**<sup>1</sup>: urn:iso:std:iso:30042:ed:3.0

**Description:**

The Core module is the foundational module for all valid TBX dialects. Unlike the other modules, Core module provides the XML structure, elements, and attributes which define TBX. Also, the few data categories provided by Core are unique as they are all DCT (Data Category as Tag) style. For example, instead of /term/ (a data category) being <classificationElement type="term">, it is always <term>.

To see the structure provided in Core, please view the Core schema or ISO 30042.

**Data Categories:**

Name	PID	Classification	Value(s)	Parent Element(s) <sup>2</sup>
date	<a href="http://www.datcatinfo.net/datcat/DC-4335">http://www.datcatinfo.net/datcat/DC-4335</a>	n/a	ISO 8601 Date	<ul style="list-style-type: none"><li>transacGrp</li></ul>
note	<a href="http://www.datcatinfo.net/datcat/DC-508">http://www.datcatinfo.net/datcat/DC-508</a>	n/a	PCDATA	<ul style="list-style-type: none"><li>conceptEntry</li><li>langSec</li><li>termSec</li><li>descripGrp</li><li>adminGrp</li><li>termNoteGrp</li><li>titleStmt</li><li>transacGrp</li></ul>
term	<a href="http://www.datcatinfo.net/datcat/DC-382">http://www.datcatinfo.net/datcat/DC-382</a>	n/a	PCDATA	<ul style="list-style-type: none"><li>termSec</li></ul>

---

<sup>1</sup> The Core Namespace is used by all valid TBX files.
